

Trouble Ticket Express

Operator Manual

rev. 1.0.

1. System Overview

1.1. Concepts

The Trouble Ticket Express is a web based help desk system. The program allows efficient processing of customer inquiries. Each inquiry is referred by as a *ticket*. A ticket consists of one or more *messages* arranged in chronological order. A message is very close equivalent of email letter: it has author and date attributes, contains some text and may have file attachments. Each message represents a note posted by a *customer* or a service desk representative - an *operator*.

The help desk software allows tracking of ticket status, such as whether it is new or solved, which operator owns the ticket, what department the ticket is assigned to.

2. Ticket Processing Workflow

2.1. Ticket submission.

A customer may submit a new ticket by either sending email message to a dedicated email address or using web form. The email-based submission requires an optional software module and may be unavailable on your system. The web form is preferred method, as it allows collection of extended information (e.g. phone or order number, software version, location) and does not require publishing email address on your web site.

The picture 1 shows sample contact form. All contact forms require name, email address and at least one of the subject or problem description. The *Phone Number* is an example of custom field and *Access code* is an optional feature.

Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition

Pic.1. Ticket submission form.

Upon submission, the Trouble Ticket Express assigns *Pending* status to the new ticket and shows a confirmation page (picture 2). The page provides instructions for accessing the ticket. The customer does not need to register with and login to the help desk in order to access his or her inquiries. The program generates unique access key for each ticket. Using this key a customer may access the ticket for reviewing and submission of follow-up messages. Normally there is no need to remember or enter this key, as each email generated by the help desk includes a direct link that incorporates the access code.

Contact Customer Service

We have received your message and created a service ticket **#6**. Please refer to this number in all follow-up communications relating to this specific issue.

Note: We have sent a confirmation email to **jd@unitedwebcoders.com** including instructions for tracking status of your ticket. If you did not receive the confirmation shortly after submission of your inquiry, there is something wrong with the email address you provided. Please be advised that if we cannot deliver a confirmation, we cannot deliver an answer as well. In an event of email delivery problems please use our online system in order to fetch an answer.

In order to access your service request via our online system, please use the following access key:

6Z662135359278728596

or follow this link

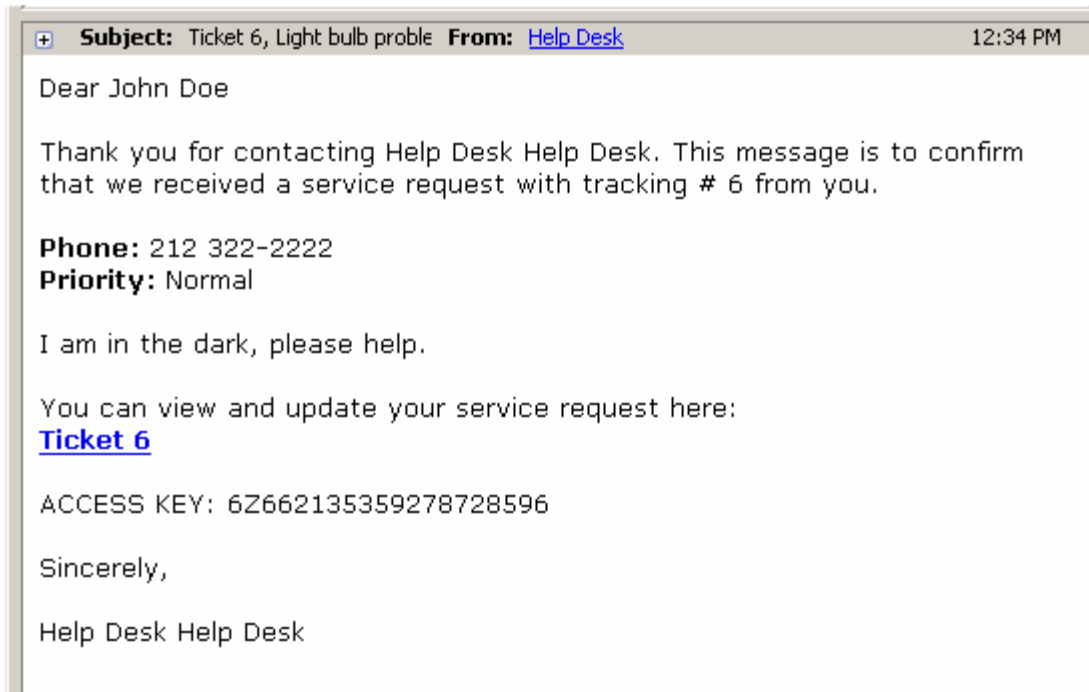

Ticket #6 (do not forget to bookmark it)

(both key and link have been sent to your email address **jd@unitedwebcoders.com** as well)

Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition

Pic.2. Confirmation page.

The Trouble Ticket Express also sends an email to the customer with a copy of submitted message and access instructions, see picture 3.

Pic.3. Email confirmation.

At the same time, the program notifies help desk operators about new ticket submission. Picture 4 shows sample email notification.

Pic.4. Email notification.

- Summary: Upon a ticket submission the Trouble Ticket Express
- assigns unique ID to the ticket and appends it to the service queue;
 - generates confirmation page with access instructions;
 - sends confirmation email to the customer;
 - issues email notifications to operators

2.2. Ticket assignment.

While any operator may add a message to a ticket, one of the operators must be designated as an owner of the ticket prior to any other activity. Unless your administrator activated optional direct assignment mode *and* a customer did specified an operator to assign the ticket to, the new ticket will retain *Pending* status. An operator must explicitly claim the ticket prior to composing an answer or transferring it to another operator or department.

To start working session an operator needs to login to help desk system first. The picture 5 shows typical login page. Please contact your administrator for user ID and password.

Password

Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition

Pic. 5. Login page.

After logging in an operator is directed to the ticket browser page. The page shows a list of tickets and provides numerous controls for navigating the list. The layout of the page may be different on your system, as your administrator may change it using an optional Layout Designer module. By default, Trouble Ticket Express shows most recently updated tickets first. See picture 6 for an example of ticket browser page. Please note, that using the link provided in the new ticket notification message (picture 4) you may skip the ticket browser and proceed directly to the ticket page (picture 7).

Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition

Pic. 6. Ticket browser

To select a ticket from the ticket list, one must click the ticket's subject. The picture 7 shows the typical unclaimed ticket page. The form provides complete information about the ticket and allows either claiming or deleting the ticket. The Trouble Ticket Express ensures that only one operator may claim a ticket. An attempt to claim a ticket that already owned by another operator will result in error message. Please note that your administrator may disable the *Delete ticket* option for your account. Use *Cancel* button to return to ticket browser.

John Doe [65.98.70.98] 08/23 08:34	Phone: 212 322-2222 Priority: Normal I am in the dark, please help.
--	---

Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition

Pic. 7. Unclaimed ticket page.

2.3. Preparing an answer.

The picture 8 shows typical ticket page. The form allows posting messages, changing ticket status and transferring ticket to another operator or group.

Please note that ticket status now changed to *Open*. The Trouble Ticket Express is a communication tool and it tracks state of communication flow using ticket status. The *Open* status means the ticket has been assigned to an operator and the operator is preparing an answer. That is *some action is expected from the operator*.

To prepare an answer just type it in the text area and press *Add message* button. Normally you should not care about specifying ticket status, as Trouble Ticket Express will automatically update it to *Responded* (see picture 9). The *Responded* status is an indication of *some action expected from the customer*.

We have an exact copy of the light bulb here and it seems to be working fine. Can you tell me what kind of system you have? Just exactly how dark is it? There could be four or five things wrong. Have you tried the light switch?

--	--

Pic. 9. Ticket page after submission of an answer.

Please note that Trouble Ticket Express will not send notification about the answer to operators, as it does not make sense notifying an operator about the message he or she just posted. In addition, broadcasting a conversation to the operators that are not involved into processing of the ticket does not seem to be justified in the most cases. However, if an operator that does not own the ticket posted an answer, the owner (*admin* as per the example) would get a notification email.

2.4. Submission of a follow-up message.

When an operator posts a message the Trouble Ticket Express sends an email notification to a customer (see picture 10). The email contains text of the new message and provides a link to access the ticket page. A customer may submit a follow-up message by either replying to the email just received or using web form. The email-based submission requires an optional software module and may be unavailable on your system.

Pic. 10. New message notification for a customer.

The picture 11 shows the ticket page as shown to a customer. Please note that it lacks some information and controls. The page does not show IP addresses the messages were submitted from and does not allow transferring the ticket.

Yes, I tried the light switch. Nothing changed. I am still in the dark.

Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition

Pic. 11 Ticket page, customer posts a follow-up message.

Submission of a follow-up message results in email notification to the operator that owns the ticket. Note that Trouble Ticket Express will not send notifications to all operators. Only owner will be notified.

The system also sends an email message to the customer. The letter contains a copy of the message posted and access instructions.

2.5. Transferring a ticket.

Very often processing a ticket assumes teamwork. Other employees may be involved to provide additional information or perform specific tasks. To track the flow of processing the Trouble Ticket Express allows changing ticket ownership or *transferring* a ticket. To transfer a ticket you need select an operator from a drop down list.

Additionally, the program supports internal messaging - if a message was marked as *Internal*, it will not be shown to a customer.

Paul, could you please replace the bulb?

Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition

Pic. 12. Transferring a ticket using internal communications mode.

The Trouble Ticket Express always notifies a recipient when a ticket is being transferred. The picture 13 shows sample ticket transfer notification.

Pic. 13. Ticket transfer notification

2.6. Closing a ticket.

The picture 14 shows ticket page as seen by the operator the ticket has been transferred to. Please note that

- *Operator* field now shows that user with ID *paul* now owns the ticket;
- The last message is shown with gray background. By default the Trouble Ticket Express uses gray background to show internal messages.
- Status of the ticket did not change, the ticket stays *Open*, that is some action is still expected from an operator. The status did not change because the last message was internal.

The light bulb has been replaced.

Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition

Pic. 14 Second operator is closing the ticket.

By default, Trouble Ticket Express will change ticket status to *Responded* after non-internal message posted by an operator. In order to close the ticket an operator must explicitly specify new status.

The closed ticket page is shown on pictures 15 (operator view) and 16 (customer view). Please note that

- Ticket status changed to *Solved*
- Customer page does not include internal message
- Customer page does not allow re-opening a ticket. Although the page still includes message box, any message posted will open a new ticket.

Pic.19. Ticket Browser, Showing abstracts

3.3 Text search

Trouble Ticket Express allows search tickets that contain specific text. To perform the search, just enter the words or phrase into the search box and click *Search* button. The picture 20 shows result of searching tickets that contain phrase *light bulb*.

In order to search for an exact phrase use double quotes. Example: *"light bulb"*. Entering *light bulb* without quotes would result in a search for the tickets that contain both words *light* and *bulb* in no particular order.

To reset search filter click *Show all* button.

The screenshot shows the 'Help Desk' interface. At the top, it says 'Logged as Paul Shaw' and provides navigation links: Home | Dashboard | Tickets | Contact us | Reports | Logout. Below this is the search form with the following fields: Text (containing '"light bulb"'), Subject (empty), Ticket # (empty), Operator (dropdown), Status (dropdown), Priority (dropdown), and Date Range (multiple dropdowns). Below the search form, it says 'Show 20 tickets per page. Include abstracts '. There are 'Search' and 'Show all' buttons. Below the search form, it says 'Tickets 1 - 1 out of 1' and 'first prev next last'. The table below has the following data:

sel	id	name	email	operator	subject	status	updated	Priority
<input type="checkbox"/>	6	John Doe	jd@unitedwebcod...	paul	Light bulb problem	Solved	08/28 15:27	Normal

Below the table, there is a text snippet: '... an exact copy of the light bulb here and it seems to ... please replace the bulb? The light bulb has been replaced.' Below this are buttons: 'Close selected', 'Delete selected', 'Assign to' (dropdown), and 'first prev next last'. At the bottom, it says 'Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition'.

Pic. 20. Ticket Browser, Using text search.

3.4. Using multiple search conditions.

You may combine multiple search filters. Trouble Ticket Express uses logical AND operation to combine search conditions. In other words, the final set of tickets is a result of applying all search conditions. The Picture 21 shows an example of searching high priority tickets that are not solved yet (that is status is anything but *Solved*).

The screenshot shows the 'Help Desk' interface. At the top, it says 'Logged as Paul Shaw' and provides navigation links: Home | Dashboard | Tickets | Contact us | Reports | Logout. Below this is the search form with the following fields: Text (empty), Subject (empty), Ticket # (empty), Operator (dropdown), Status (dropdown, set to 'Not solved'), Priority (dropdown, set to 'High'), and Date Range (multiple dropdowns). Below the search form, it says 'Show 20 tickets per page. Include abstracts '. There are 'Search' and 'Show all' buttons. Below the search form, it says 'Tickets 1 - 1 out of 1' and 'first prev next last'. The table below has the following data:

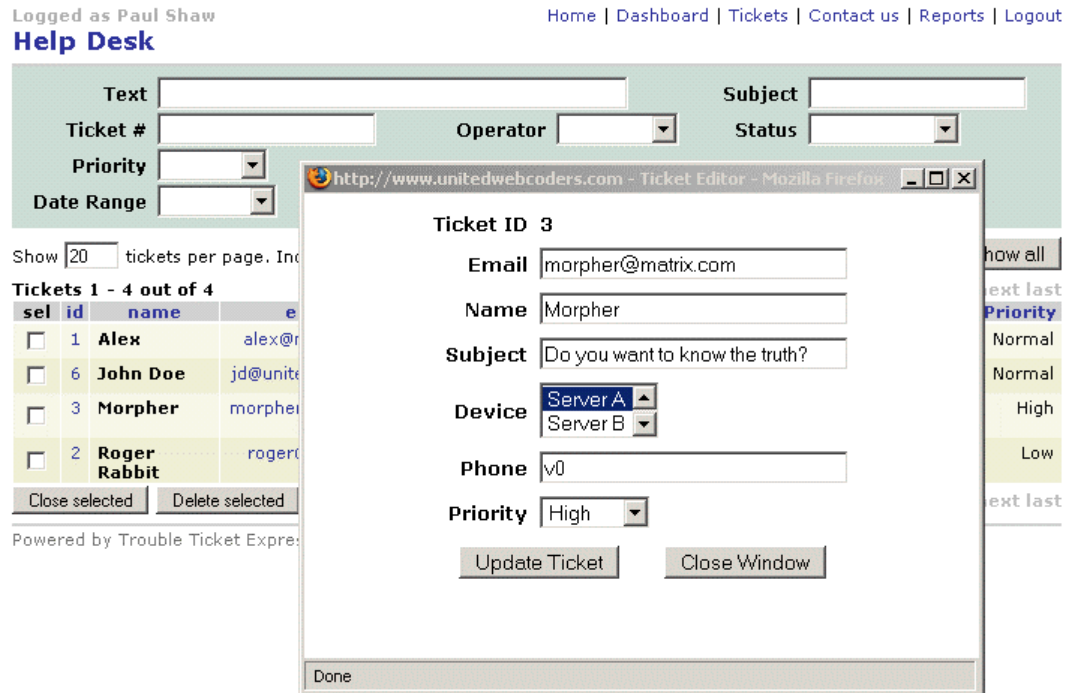

sel	id	name	email	operator	subject	status	updated	Priority
<input type="checkbox"/>	3	Morpher	morpher@matrix...	admin	Do you want to know the truth?	Responded	08/15 13:05	High

Below the table, there are buttons: 'Close selected', 'Delete selected', 'Assign to' (dropdown), and 'first prev next last'. At the bottom, it says 'Powered by Trouble Ticket Express rev. 2.22.224 MySQL Edition'.

Pic.21. Ticket Browser, Searching high priority tickets that are not solved yet.

3.5. Ticket editor

While in Ticket Browser, you may activate ticket editor. It shows in a pop-up window and allows changing customer email address, name, ticket subject and any of the custom fields that your administrator marked as editable. To activate the editor please click on the ticket ID. The picture 22 shows result of clicking the ticket #3.

Pic.22. Ticket editor window.

4. Using Answer Library.

The Answer Library is an optional module that allows organizing answers to common questions. The link to the Answer Library is shown above the message editor box. Clicking on the link will bring the Answer Library pop-up window as shown on the picture 23.

Pic. 23. Activating Answer Library.

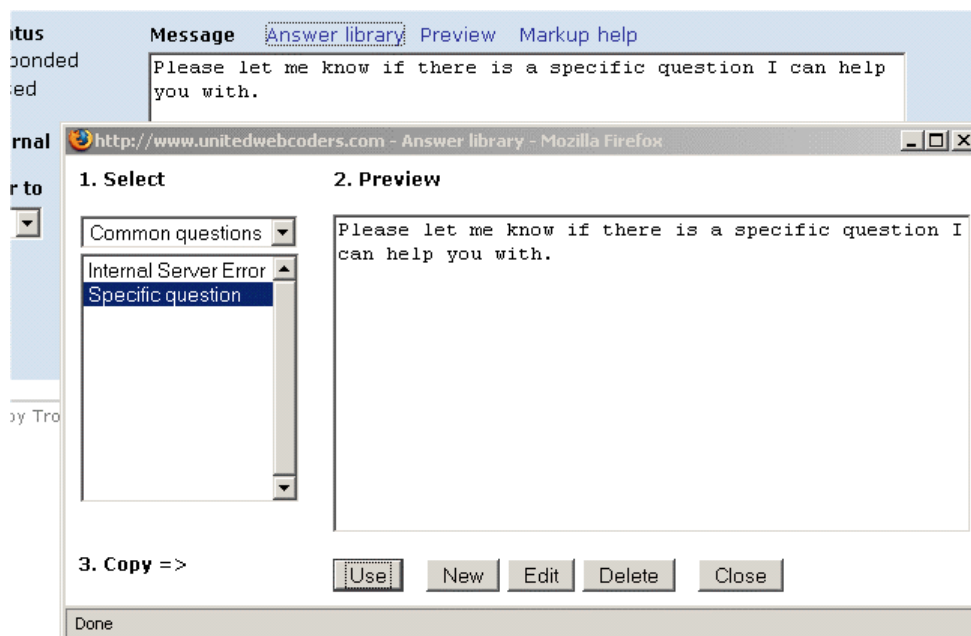

4.1. Using an answer template.

To select an answer template choose the category (*Common questions* as per example on pic. 23), than click on the question title. Doing this will show the template in the preview box. The picture 24 shows the *Specific question* template selected.

Pic.24. Answer Library. Selecting an answer template.

In order to append the answer template to the message click *Use* button. See picture 25.

Pic.25. Answer Library. Answer template has been appended to a message.

4.2. Creating new answer template.

To create a new answer click the *New* button. In the new answer form (picture 26) fill in the *Title* and *Answer* fields and select a category. Checking the *Common* box will add the answer template to shared library, thus all operators will be allowed to use the answer. However, you will retain an ownership over the template, that is only you may apply changes to it. Click *Update* button to save the answer. Click *Done* when ready.

Important: The *Done* button will exit the answer editor form without applying any changes. Do not forget clicking the *Update* prior to leaving the form.

The screenshot shows a web browser window titled "http://www.unitedwebcoders.com - Answer editor - Mozilla Firefox". The form contains the following elements:

- Title:** A text input field containing "Please elaborate".
- Select existing category:** A dropdown menu with "Common questions" selected.
- or define new one:** An empty text input field.
- Answer:** A large text area containing the text "Not sure about your question. Could you please elaborate a bit?".
- Common:** A checked checkbox followed by the text "(available to all operators)".
- Buttons:** "Update" and "Done" buttons.

Pic.26. Answer Library. Creating new answer template.

4.3. Editing an answer template.

To modify an answer template first select it (see picture 24), then click *Edit*. Please note that you may edit only the answer templates you own.

4.4. Deleting an answer template.

To delete an answer template first select it (see picture 24), then click *Delete*. Please note that you may delete only the answer templates you own.

Appendix

A. Understanding ticket status.

Pending. Service ticket is queued for processing. No operator assigned to the ticket. This is an initial state of any inquiry.

Open. Service ticket is taken by an operator. Response required from the operator. A customer may add a follow up message to the ticket.

Responded. A response has been sent to a customer. The response may contain complete answer or a request for further information. Response may be required from the customer. An operator may add a follow up message to the ticket.

Solved. The service ticket is closed. A customer may not add a follow up message. An operator may reopen the ticket.

Please keep in mind that the Trouble Ticket Express facilitates communication process. Communication is a sequence of questions and answers, the call and response process. Any communication tool must be able to track who is responsible for the next action. If status is *Open* - the operator is responsible. Status is *Responded* - the operator did his or her job, an input (may be) awaited from a customer.

The Ticket Browser shows additional options for status in the filter drop down selector. These options are aliases for a combination of status values. They may not be assigned to the status field and are for search filter only.

Active. An alias for *either Open or Responded*.

Hot. An alias for *either Open or Pending* (i.e. operator action required).
